EDUCATION

B.Tech Computer Science - Data Science

Netaji Subhas University of Technology, Delhi

Expected April 2027

EXPERIENCE

Data Engineering Intern

May 2024 - July 2024

Jupiter

- Created ~50 SQL queries to power product insights on top of a BigQuery database with ~500 tables.
- Migrated ~15 manually operated ETL Google Collab scripts to automated data pipelines. Built using a combination of backend endpoints deployed on Google Cloud Run along with Google Cloud Scheduler for orchestration. This saved 2 hours of manual effort every day.
- Setup CI/CD on the data pipeline using Cloud Build and Github Actions.
- Built impactful customer facing and internal dashboards by leveraging Explo and Google Looker Studio.
- Developed a Slack notification system for key business metrics like acquisition, churn, updation.

Backend Engineering Intern

December 2023

Inhouse

- Created new server endpoints and built tests for them using Python's FastAPI framework.
- Created and updated SQL database table schemas using migration files.
- Implemented CI/CD pipeline using Cloud Build to run database migrations on CockroachDB database and deploy to Google Cloud Run.
- Integrated GitHub Actions to run tests on pull requests and ensure code formatting.
- Migrated the authentication system from Firebase Authentication to Google Identity Platform.
- Slashed system latency by ~50% by using a singleton database client.

SKILL

Expert: · Python · SQL · Docker · Data Structure & Algorithms · Server Programming · Git · CI/CD · Redis ·

Microsoft Azure: · Container Apps · PostgreSQL/Postgres · Logic Apps · Container Registry ·

Google Cloud: · Cloud Run · Cloud Build · BigQuery · Realtime Database · Artifact Registry · Identity Platform ·

Others: · Shell · NextJS · C++ · CockroachDB · Flutter · VueJS ·

Soft Skills: · Collaboration · Adaptability · Problem-Solving · Communication · Leadership ·

PROJECTS

WhatsApp ChatBot

3,000 Active Users | Ongoing

Python · WebHooks · PostgreSQL · Meta API · Azure

[Landing Page](#)

- Streamlined attendance checking for NSUT students directly through WhatsApp.
- Built using Python and WebHooks, integrating the WhatsApp API with web scraping for automated attendance retrieval.
- Implemented a scalable setup with response time of 300ms (p99) at peak load of 5K requests per ho.
- Monitored latency, container metrics, user load, SQL machine metrics, daily trends and more via dashboards built on Explo.
- Collaborated with a college society to manage high operational costs, which helped in building trust and increasing the user base to over 3,000 frequent users.

Air-It

Under Development

Python · Websockets · Load Balancing · PostgreSQL · Azure

- A web app for high-speed, real-time file transfers, similar to AirDrop but better, with cross-platform support, fast transfers, best quality, and the ability to work over the internet for long-distance data transfers.
- Enables large data transfers between users, supporting both one-to-one and one-to-many setups.
- Utilizes WebSockets for data transfer directly from RAM, avoiding disk I/O for maximum speed.
- Developed a scalable system that dynamically creates nodes with unique URLs as needed.
- Currently focusing on making the UI user-friendly and enhancing the scalability of the setup.

Financial-Nexus

HackWithIndia - Top 40/500 | March 2024

Python · PostgreSQL · Gemini API · Azure

[Backend GitHub Repo](#)

- Developed a secure web application using Next.js and Python to store and manage user financial data including bank transactions, assets, loans, EMIs, and credit cards.
- Integrated Gemini API to provide personalized financial advice based on user data.
- Collaborated with friends/colleagues on the frontend built using Next.js and the AI components.
